Gamma-glutamyltransferase increased
Advise females and males of reproductive potential that use of arsenic trioxide may impair fertility in males of reproductive potential. Advise male patients of the potential risk to future fertility following treatment with arsenic trioxide. Advise male patients to use effective contraception during and for two weeks after treatment with arsenic trioxide. Advise females of reproductive potential to use a reliable method of contraception during and for two weeks after treatment with arsenic trioxide. Conduct pregnancy testing in females of reproductive potential prior to initiating treatment with arsenic trioxide. Advise patients that arsenic trioxide may cause ECG abnormalities. Advise patients to provide a complete list of current medications as adrenal suppression may be enhanced by concurrent administration of corticosteroids. Advise patients to immediately report any of these symptoms. Advise patients that arsenic trioxide is a cytotoxic drug. Adhere to applicable special handling and disposal procedures. Store at 20° - 25°C (68° - 77°F); excursions permitted to 15° - 30°C (59° - 86°F).
