Germ Cell Mutagenicity: Suspected of causing genetic defects. Foscarnet sodium showed genotoxic effects in the BALB/3T3 in vitro transformation assay at concentrations greater than 0.5 ug/mL and an increased frequency of chromosome aberrations in the sister chromatid exchange assay at 1000 ug/mL.

Carcinogenicity: No evidence of carcinogenicity seen in unfasted rats and mice when dosed orally at 500 mg/kg/day and 250 mg/kg/day. (Based on available data, the classification criteria are not met)

Specific Target Organ Toxicity (Repeated Exposure): Causes damage to kidneys through prolonged or repeated exposure. Route of exposure: Oral. May cause damage to blood, hematopoietic system, cardiovascular system, and nervous system through prolonged or repeated exposure. Route of exposure: Oral.

Reproductive Toxicity: Suspected of damaging fertility or the unborn child. Daily subcutaneous doses up to 75 mg/kg administered to rabbits and 150 mg/kg administered to rats during gestation caused an increase in the frequency of skeletal anomalies/variations. On the basis of estimated drug exposure (as measured by AUC), the 150 mg/kg dose in rats and 75 mg/kg dose in rabbits were approximately one-eighth (rat) and one-third (rabbit) the estimated maximal daily human exposure. These studies are inadequate to define the potential teratogenicity at levels to which women will be exposed.

Specific Target Organ Toxicity (Single Exposure): Not classified (Based on available data, the classification criteria are not met)

Aspiration Hazard: Not classified

Symptoms/Injuries After Inhalation: Prolonged exposure may cause irritation.

Symptoms/Injuries After Skin Contact: Prolonged exposure may cause skin irritation.

Symptoms/Injuries After Eye Contact: May cause slight irritation to eyes.

Symptoms/Injuries After Ingestion: Ingestion may cause adverse effects.

Chronic Symptoms: Suspected of damaging fertility or the unborn child. Causes damage to organs through prolonged or repeated exposure. Suspected of causing genetic defects.
